# Application

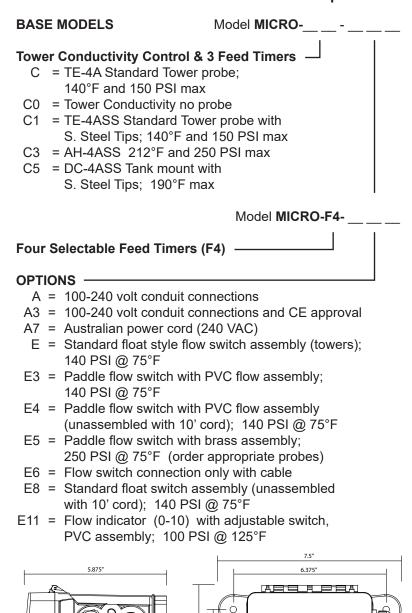

The MICROtron is a compact, four relay microprocessor-based controller with many standard features. MICROtron models are available to control conductivity and three selectable feed timers, or four independently programmable feed timers.

The MICROtron platform provides an economical option for conductivity control of a cooling tower or other recirculating water system. Selectable feed timer options include: pulse, 28-day, recycle and post bleed, with bleed.

The next generation of MicroTron controllers can control tower or other system functions including: conductivity and a variety of selectable chemical feed timers. Each system control function drives a relay. MICROtrons come with four (4) relay outputs.
